I'm a front end and back end web developer currently residing in Lisbon, Portugal.

I'm fluent in HTML, CSS, Javascript, PHP and comfortable with LAMP development and graphic design. I also dabble in Java, Ruby & Node. Tools like Bower, Gulp, Git, SVN, npm and many others, are an integral part of my daily workflow.

I strive to keep up with the latest trends in design & development and to find ways to implement new tools and processes into my workflow. My focus is first and foremost on "user experience". I believe that the ultimate goal of a web site is to be available and usable on any device, on any connection, by any person.

EMPLOYMENT

WEB DEVELOPER at

OTHERS DIGITAL THINKING

2011—Present

At Others I develop web sites, Facebook applications & page tabs and mobile applications. At times I'm involved with prototyping, wireframing and design. I often work closely with other development agencies as well as clients of various sizes and areas of expertise. I've introduced several new tools, technologies and methodologies that have been adopted by its other members.
